

WARM-UP

List examples of each part of a circle.

SUMMING IT ALL UP: Parts of a Circle

Name, with proper notation, as many terms as you can remember from the lesson. All the blanks may or may not be used.

Term:

Notation:

Point of Tangency _____

Radius _____

Diameter _____

Chord _____

Secant _____

Tangent _____

Central Angle _____

Inscribed Angle _____

Minor Arc _____

Major Arc _____

Semicircle _____

Point of Tangency

Point E

Radius

\overline{CH} \overline{CB}

\overline{CE}

Diameter

BH

Chord

\overline{BE}

Secant

\overleftrightarrow{AF}

Central Angle

$\angle HCE$

$\angle BCE$

Inscribed Angle

$\angle HBE$

Minor Arc

\widehat{HE}

\widehat{BE}

Major Arc

\widehat{HBE}

\widehat{EHB}

Semicircle

\widehat{BEH}

DESMOS: Central Angles v. Inscribed Angles

1st Block

DESMOS: Central Angles v. Inscribed Angles

Go to: **Student.desmos.com**

Type In: **86K 9DY**

<https://student.desmos.com/join/86k9dy>

2nd Block

Find the
missing
angle or arc:

1. If $m\angle HCE = 50^\circ$, then:

a. $m\angle HBE = \underline{\hspace{2cm}}$.

b. $m\widehat{HE} = \underline{\hspace{2cm}}$.

2. If $m\angle EBH = 28^\circ$, then:

a. $m\angle HCE = \underline{\hspace{2cm}}$.

b. $m\widehat{HE} = \underline{\hspace{2cm}}$.

Find the
missing
angle or arc:

1. If $m\angle HCE = 50^\circ$, then:

a. $m\angle HBE = \underline{310^\circ}$.

b. $m\widehat{HE} = \underline{50^\circ}$.

2. If $m\angle EBH = 28^\circ$, then:

a. $m\angle HCE = \underline{56^\circ}$.

b. $m\widehat{HE} = \underline{56^\circ}$.

PUTTING IT ALL TOGETHER!

EX 1:

EX 2:

EX 3:

PUTTING IT ALL TOGETHER!

EX 1:

$$x = 110^\circ$$

EX 2:

$$x = 224^\circ$$

EX 3:

$$x = 60^\circ$$

A circle can be circumscribed around a quadrilateral if and only if its opposite angles are supplementary.

$$m\angle A + m\angle C = 180$$

$$m\angle B + m\angle D = 180$$

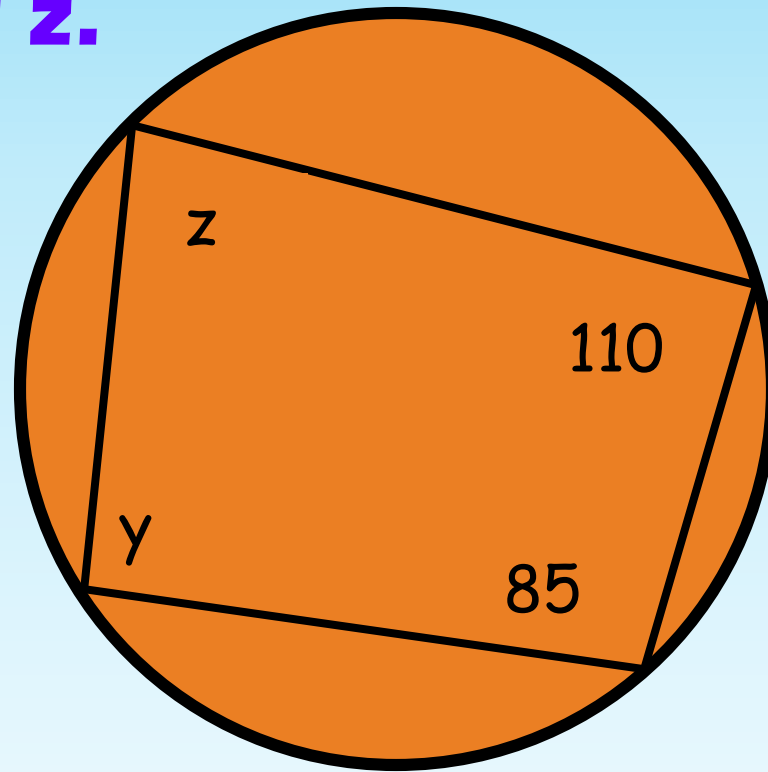

Example: Find y and z .

$$110 + y = 180$$

$$y = 70$$

$$z + 85 = 180$$

$$z = 95$$

If a right triangle is inscribed in a circle then the hypotenuse is the **diameter of the circle**

AND the angle opposite the diameter is a **right angle.**

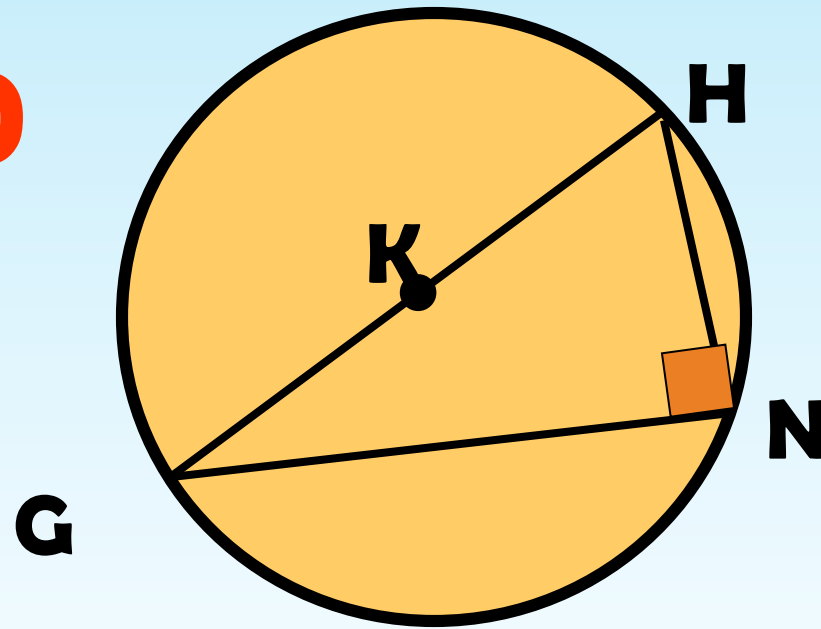

Example:

In $\odot K$, \overline{GH} is a diameter and $m\angle GNH = 4x - 14$.
Find the value of x .

$$4x - 14 = 90$$

$$x = 26$$

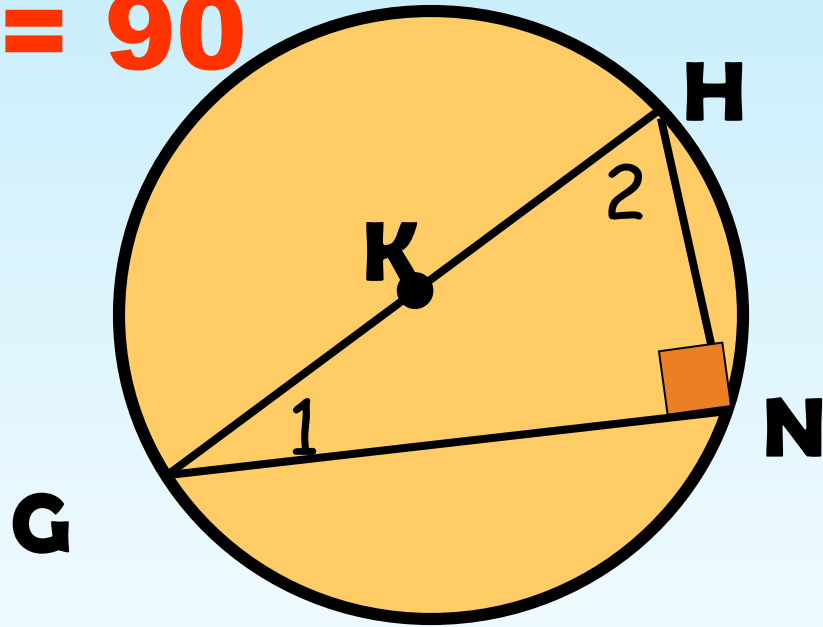

HINT: GH is also the hypotenuse.
Therefore, angle GNH is a right angle.

Example 7

$\odot K$ is a right triangle. In $\odot K$, $m\angle 1 = 6x - 5$ and $m\angle 2 = 3x - 4$. Find the value of x .

$$6x - 5 + 3x - 4 = 90$$

$$x = 11$$

HINT: Angle GNH is a right angle.
Therefore, angles G & H are complementary.

Angles with the Vertex INSIDE of the Circle

But NOT at the Center!

TYPE III: Vertex is **inside** the circle

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

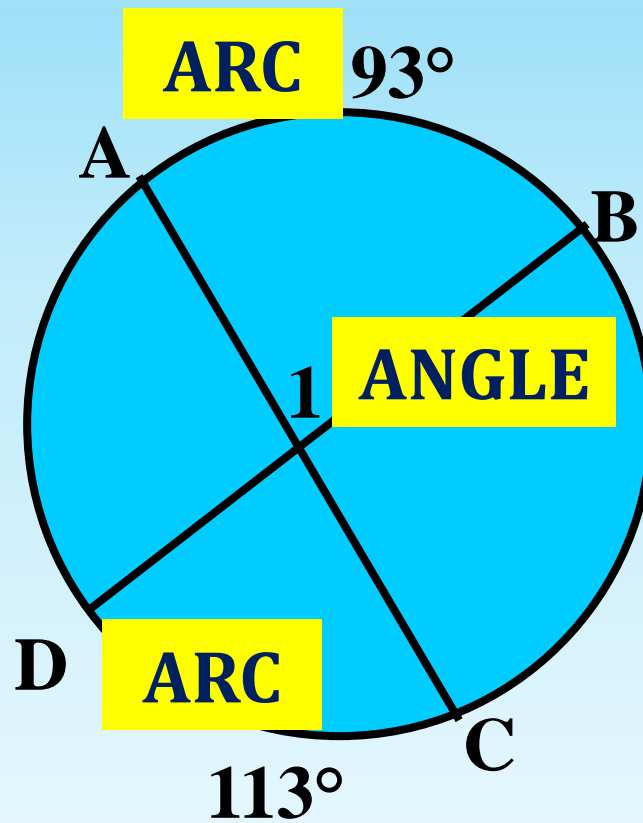

Looks like a PLUS sign!

Ex. 1: Find $m\angle 1$.

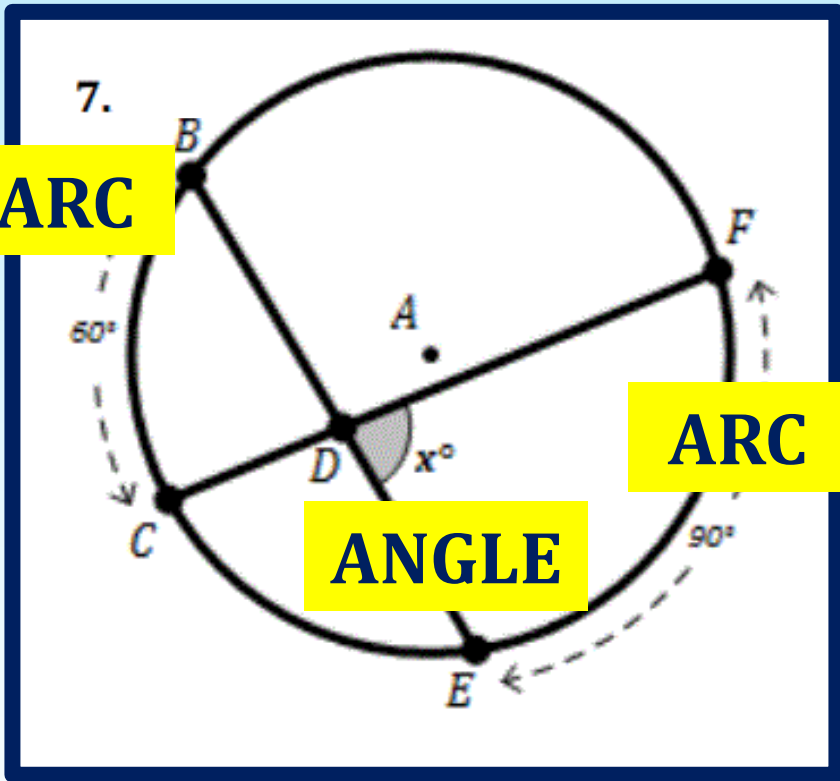

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$m\angle 1 = \frac{93 + 113}{2}$$

$$m\angle 1 = 103^\circ$$

EX 2: Find the measure of the missing angle.

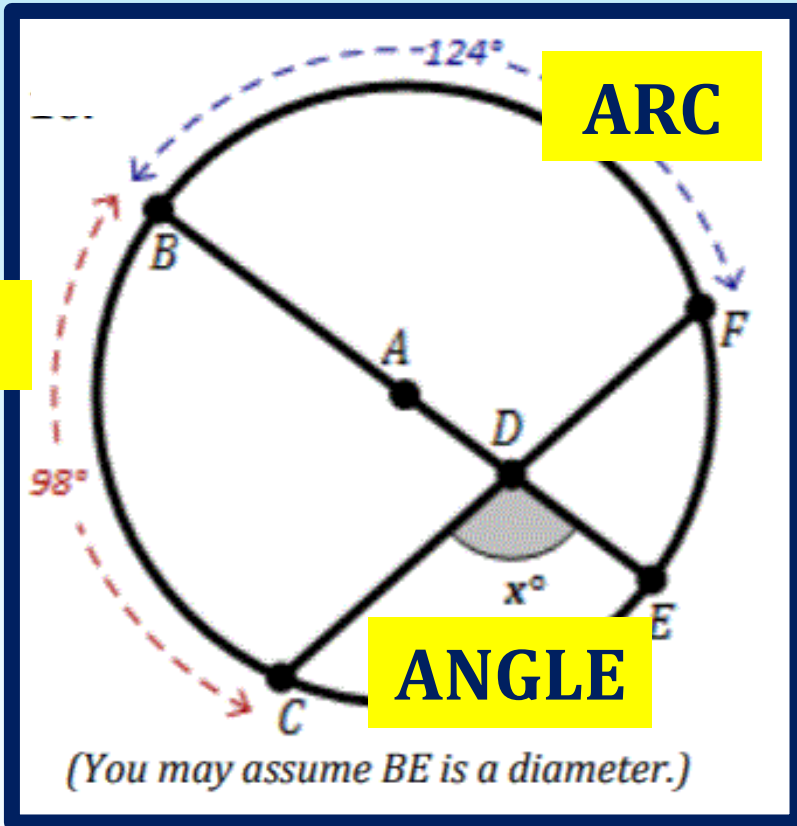

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$x = \frac{60 + 90}{2}$$

$$75^\circ$$

EX 3: Find the measure of the missing angle.

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$x = \frac{124 + 82}{2}$$

$$103^\circ$$

$$180^\circ - 98^\circ = 82^\circ$$

EX 4: Find the measure of the missing angle.

ARC

ANGLE

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$x = \frac{96 + 52}{2}$$

$$x = 74^\circ$$

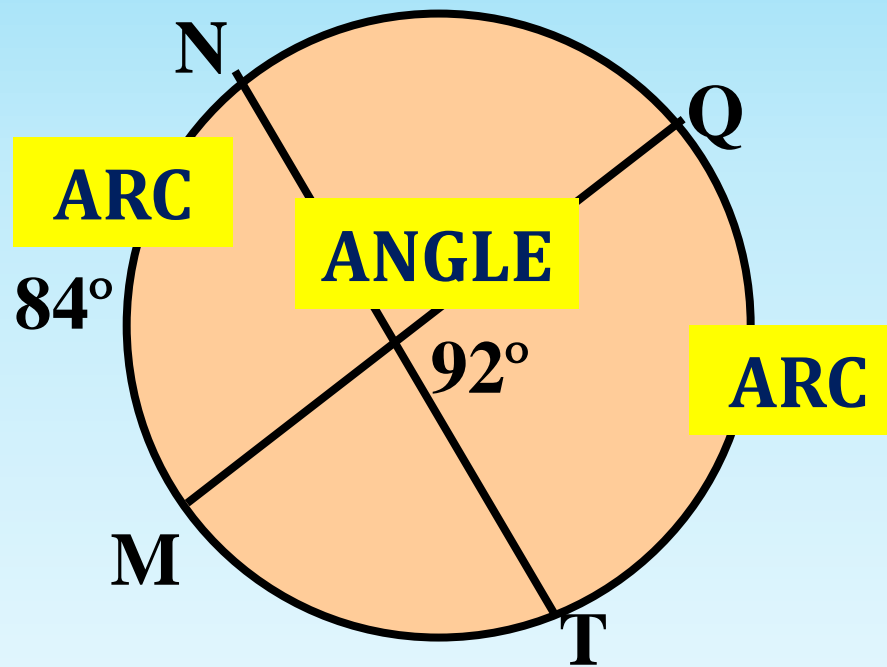

$$180^\circ - 74^\circ = 106^\circ$$

Ex. 5: Find $m\widehat{QT}$.

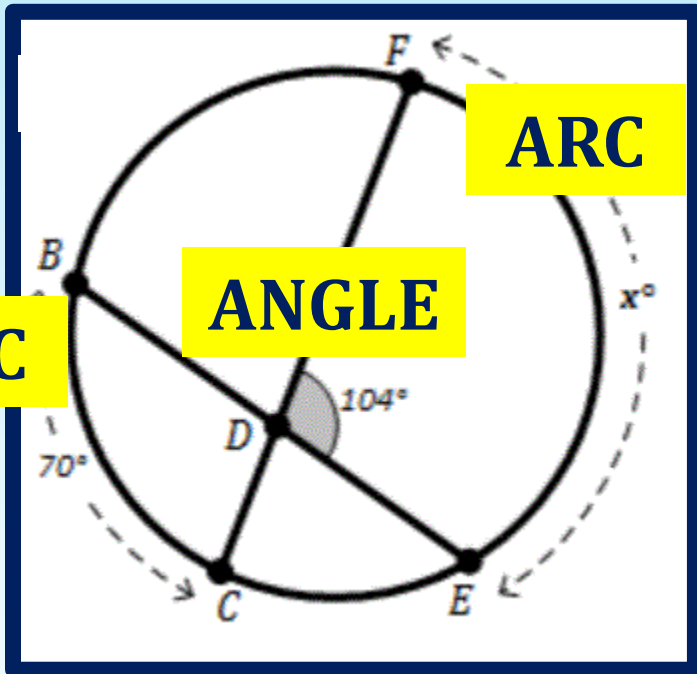

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$92 = \frac{84 + QT}{2}$$

$$m\widehat{QT} = 100^\circ$$

EX 6: Find the measure of the missing arc.

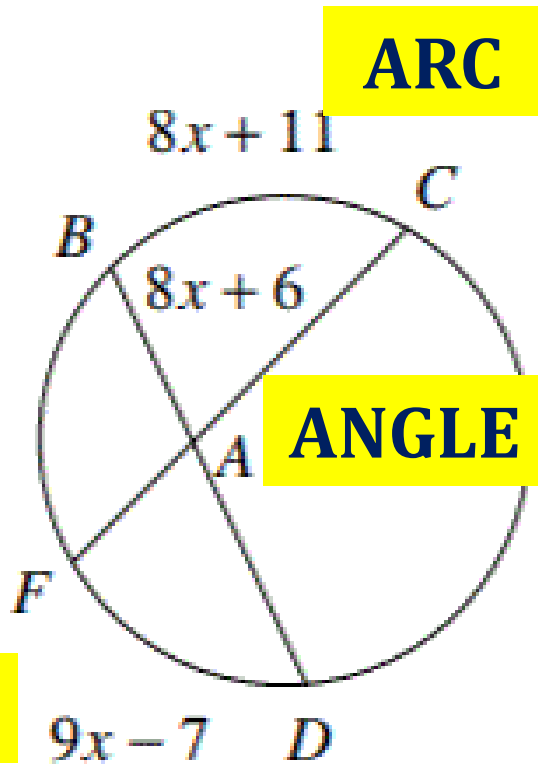

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$104 = \frac{x + 70}{2}$$

138°

EX 7: Find the measure of arc BC.

Find $m\widehat{BC}$

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$8x + 6 = \frac{8x + 11 + 9x - 7}{2}$$

75°

EX 8: Find the measure of the missing arc.

$$\text{ANGLE} = \frac{(\text{ARC} + \text{ARC})}{2}$$

$$124 = \frac{9x - 3 + 197}{2}$$

$$51^\circ$$
